

Eurovac III

Designed for Demanding Industrial Dust Control

At Eurovac, we've been manufacturing and installing dust extraction systems since 1984. Today we have more than 1500 systems installed throughout North America, in both manufacturing plants and auto body shops.

Our engineers will design a system that is exactly right for your needs, and we'll also help with vacuum assist tools for sanding and grinding, as well as accessories for vacuuming.

Our extensive research in the area of dust and fume elimination means that we are confident that we can provide the best possible solutions to converting your tools.

The Eurovac III system utilizes centrifugal multi-stage pumps which are available from 10 HP to 100 HP, and are capable of producing from 300 CFM to more than 5000 CFM at vacuum levels of 5" to 12" of Hg.

All Eurovac units are of an outboard design, with impellers mounted on a separate shaft supported by two flange mount bearings, and connected to a standard shaft motor via a flexible coupling. This arrangement makes servicing much easier than with overhung models where the impellers are mounted directly on the motor shaft. Also, our 4-bearing outboard design will last far longer

than 2-bearing overhung designs.

All Eurovac multi-stage pumps come with automatic lubricators to reduce maintenance.

The Eurovac III is designed to handle tough industrial jobs and will run problem-free all day, every day — with very little maintenance required.

Your Eurovac dust extraction system will be integrated with your compressed air system, and grounded to protect your technicians from static electrical shock.

The Eurovac III is ideal for plants and body shops with 10 or more technicians working simultaneously.
